

Throughout this half term we've been learning about the perfect world of plants!

We learned about the different ways seeds are dispersed and acted them out for our classmates to guess.

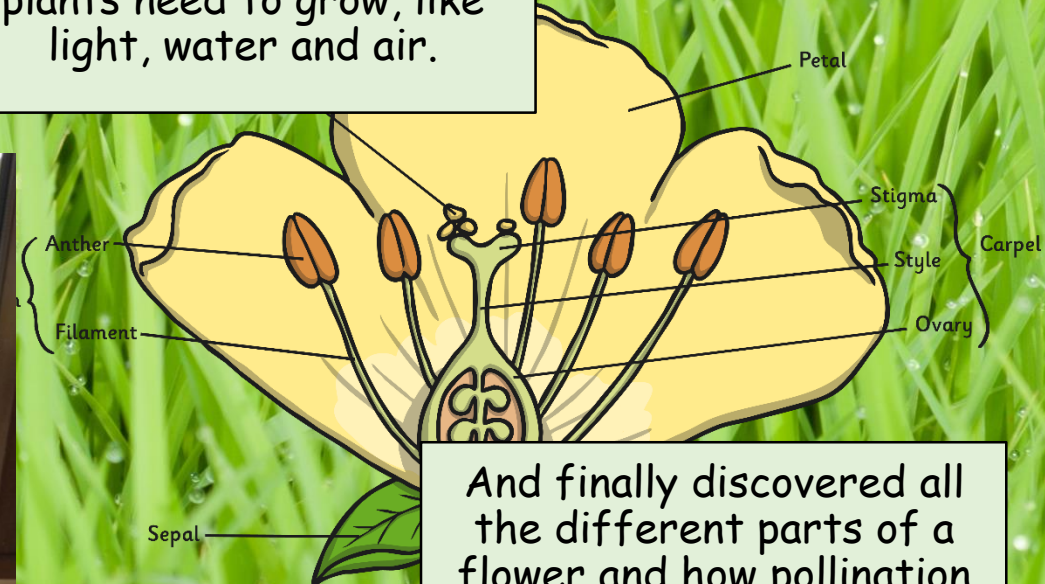

We discovered the lifecycle of a plant and created our own posters and cycles with our friends.

We discovered how water moves through plants and performed an experiment to see what would happen to our flowers if we fed them coloured water

# Plants!

We also looked at what plants need to grow, like light, water and air.

And finally discovered all the different parts of a flower and how pollination occurs!
